Question 2 : Design and develop shopping cart system [View Output](#)

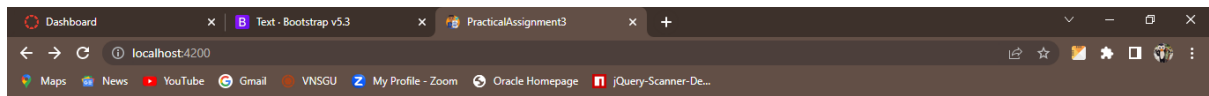

Backend - Products (CRUD) API in Express.

Frontend

- Take a combo with two values (textbox, textarea). Display textbox or textarea depending on selection of a combo.

The screenshot shows a web browser window with multiple tabs. The active tab is titled 'localhost:4200'. The page content includes a series of tasks for creating an Angular application. Each task is followed by a 'View Output' button. The tasks are: 1. Display integer, string, and date data in a component. 2. Display array values in an HTML list. 3. Display array values in a combo box. 4. Take a combo box with two values (text box, text area). Display text box or text area depending on selection of a combo box. 5. Make another component for user input form with user's personal details, take input and display data on submit. Below these tasks, 'Question 1(iv) Output' shows a form with 'Input Type' set to 'Input Box' and a text input containing 'Hello', with the output 'Value = Hello' displayed below it. 'Question 2 : Design and develop shopping cart system' is also visible with a 'View Output' button.

Display array in combo.

[View Output](#)

Take a combo with two values (textbox, textarea). Display textbox or textarea depending on selection of a combo.

[View Output](#)

Make another component for user input form with user's personal details, take input and display data on submit.
